Experiments

- Adaptation patterns
- Responsiveness

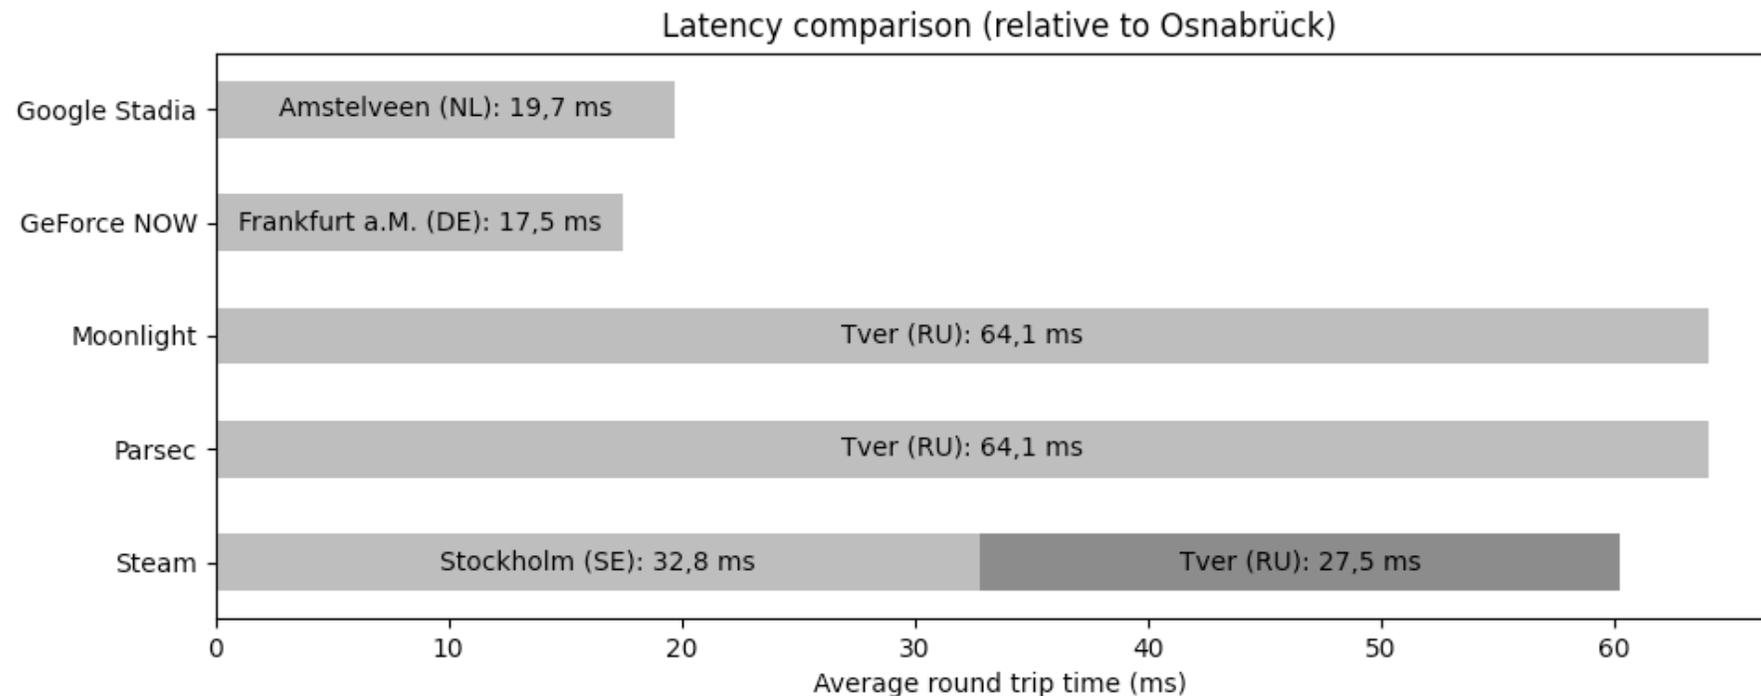

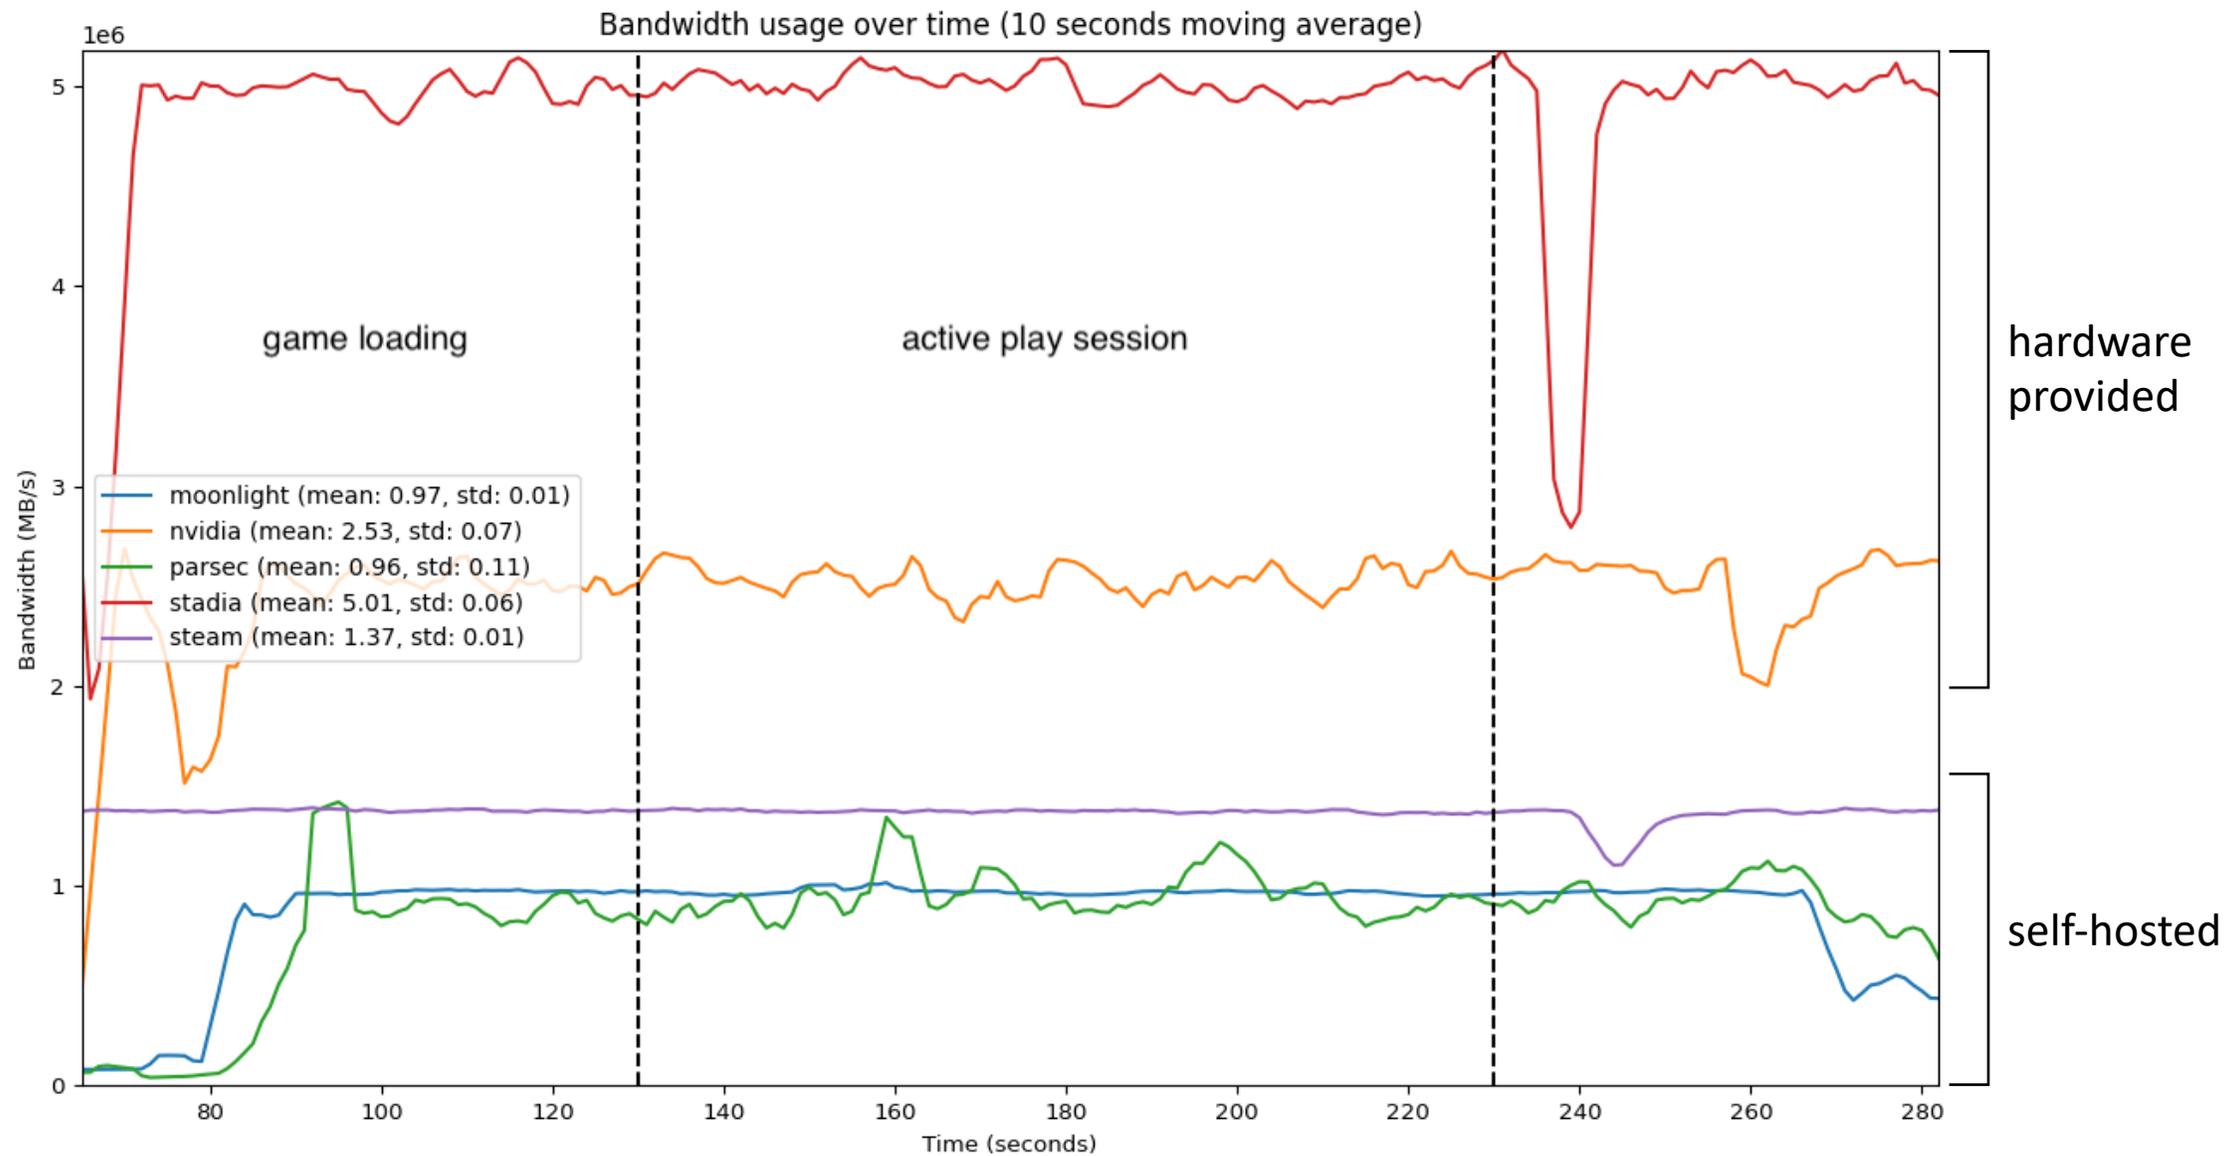

Choice of the service can be affected by the distance and size of the country:

- Lower latencies across the Europe
- Higher latencies from Europe to further away countries (i.e. Russia) make noticeable difference in user experience

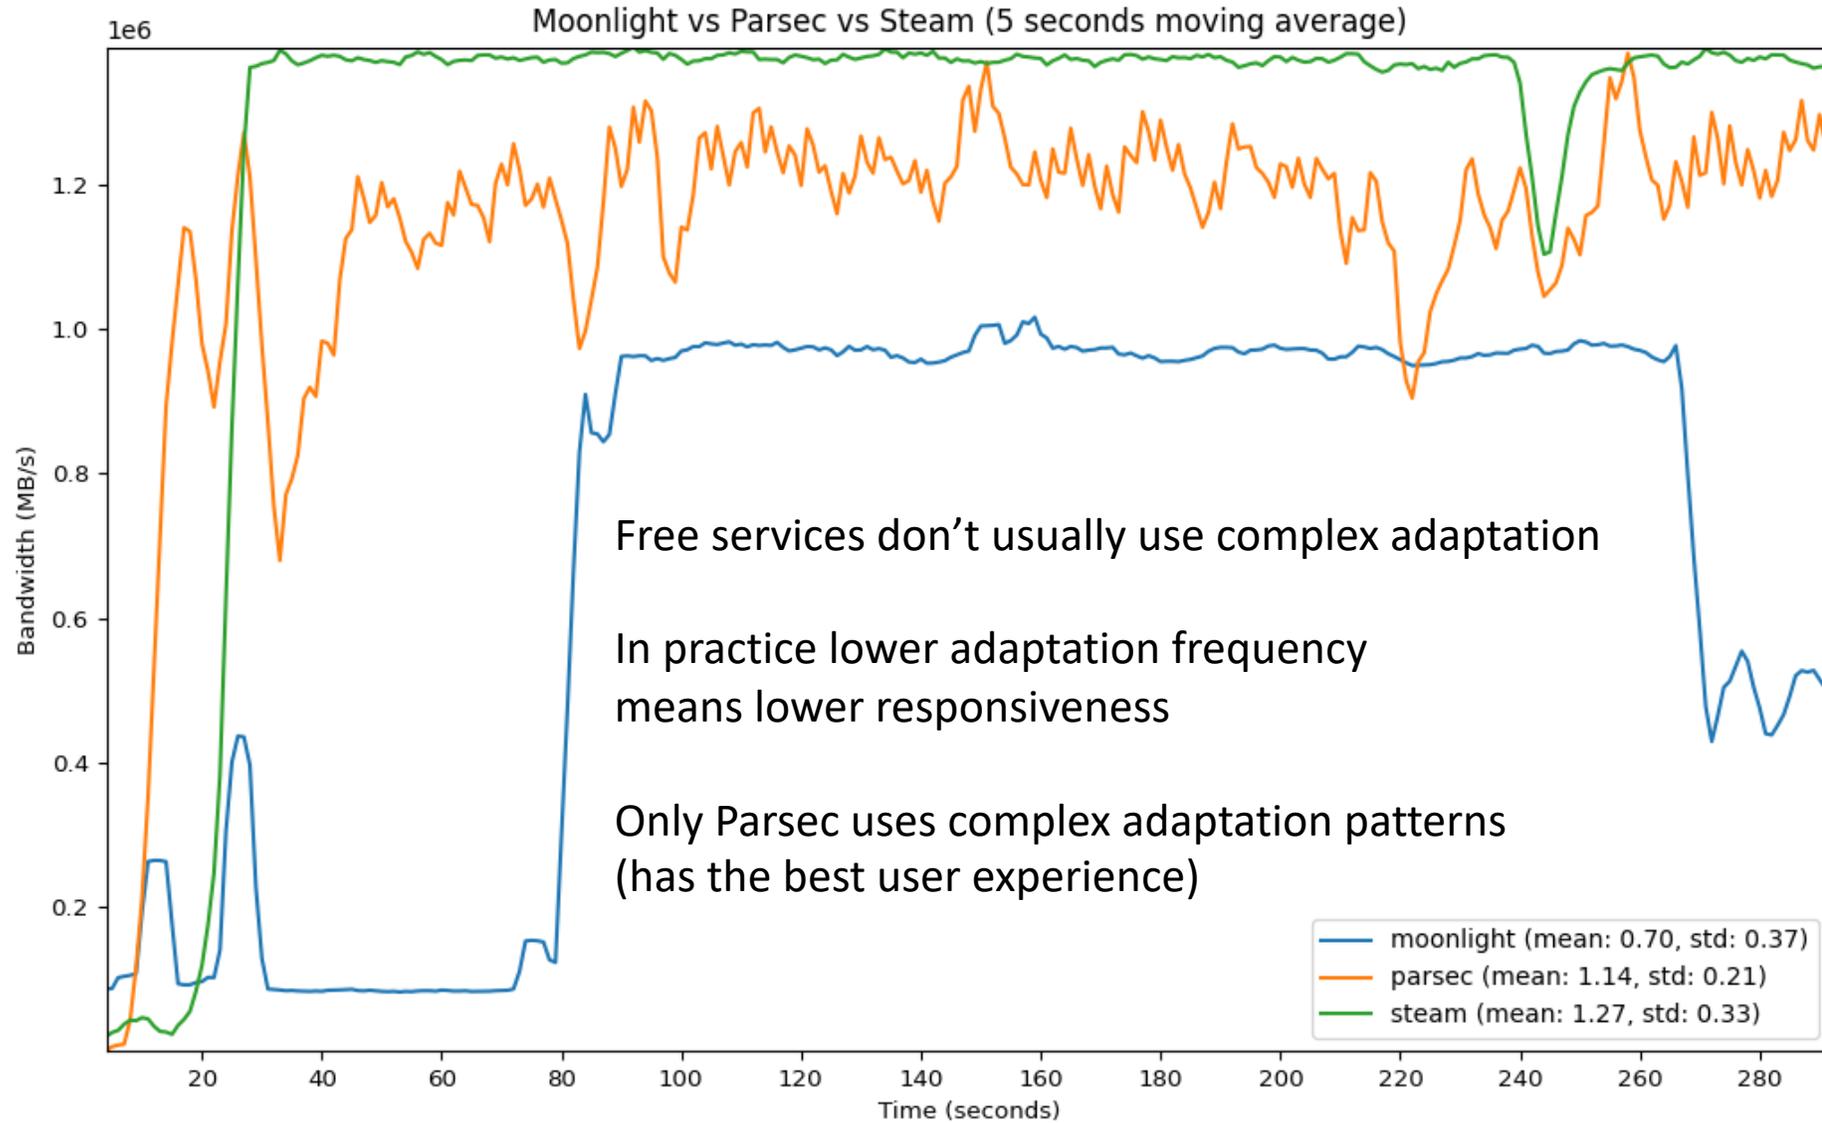

Endpoints were discovered using *Wireshark*

100 Mbit/s 5GHz Wi-Fi was used

Self-hosted service comparison

Game is playable even with low bitrate

Complex adaptation patterns prioritize input responsiveness

Summary

- Highlight of **previous research**
- **Currently available** services reviewed
- Small test carried out to show adaptation capabilities of the services
- Comparison was shown

Outlook

Benefits from such services:

- **Higher centralization** – majority of the games can be played almost on all platforms (consoles, mobiles, PC)
 - More flexibility
 - Affect game quality (on mobile market)
ability to play AAA games on your phone
- Speculation: further **migration** from **subscription-based** business model to “pay for what you use”? (like AWS)

Thank you!
